In Villeurbanne, on April 21, 2026,

Object : Letter of recommendation – Clément ASSIER

Dear Sir or Madam,

As Head of the GMPPA program at INSA Lyon, I have had the pleasure of supervising Clément during his engineering studies. He is a serious, rigorous, and committed student, demonstrating strong work ethic and genuine scientific curiosity.

During his fourth year, Clément distinguished himself through his Research, Innovation and Development project focused on a tribology study applied to hydrodynamic bearings. He conducted this work with method and precision, mobilizing solid technical skills and strong analytical abilities, while carrying out the entire project in English. The quality of his study, as well as his understanding of the underlying physical phenomena, clearly reflect his dedication and professionalism.

It is also worth emphasizing the consistency of his academic performance. He did not have to take any resit examinations throughout his studies, which demonstrates both sustained effort and a solid mastery of the coursework. The jury and the Head of Department also commended him for the efforts he made throughout the 2023–2024 academic year, despite his health situation.

In parallel with his academic path, Clément showed strong personal commitment through his participation in the 4L Trophy. This demanding project, both organizationally and humanly, highlights his initiative, perseverance, and ability to successfully carry out ambitious projects. In addition, he is a competitive rower. He has successfully balanced his studies at INSA, his work-study program at EDF, and his participation in competitive sports. This disciplined approach has enabled him to compete in international competitions in England and the United States, demonstrating his ability to manage multiple demands while maintaining a high level of performance.

Very approachable and equipped with excellent interpersonal skills, Clément communicates effectively and integrates easily into a professional environment. I am confident that he will leverage these qualities in the next steps of his career.

I therefore recommend him with confidence and enthusiasm.

Yours faithfully,

Prof. Khalid LAMNAWAR
Head of the GMPPA Program
Mechanical Engineering Department – INSA Lyon
